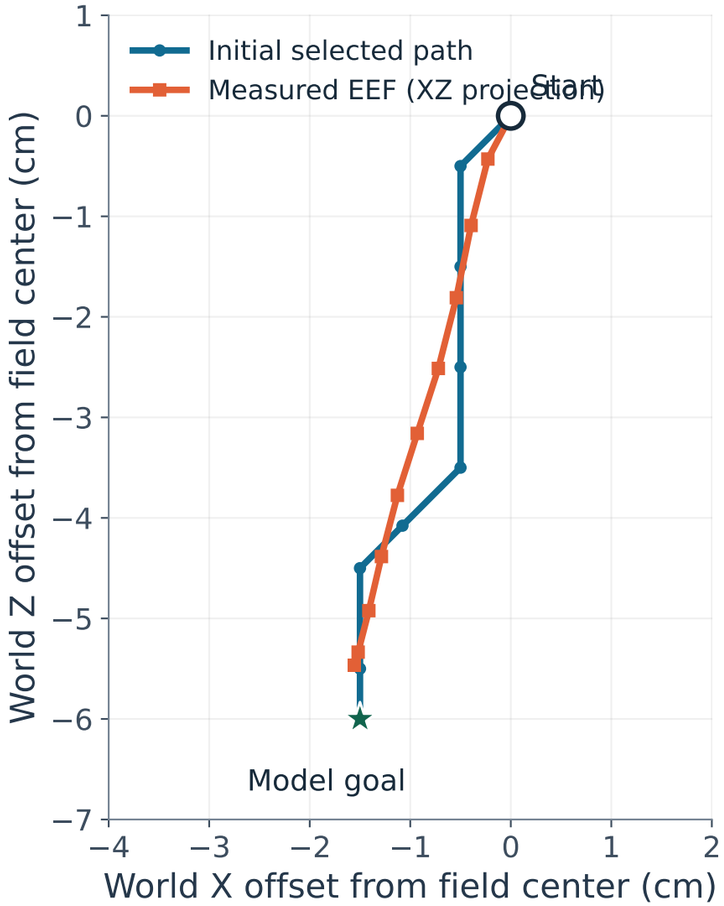
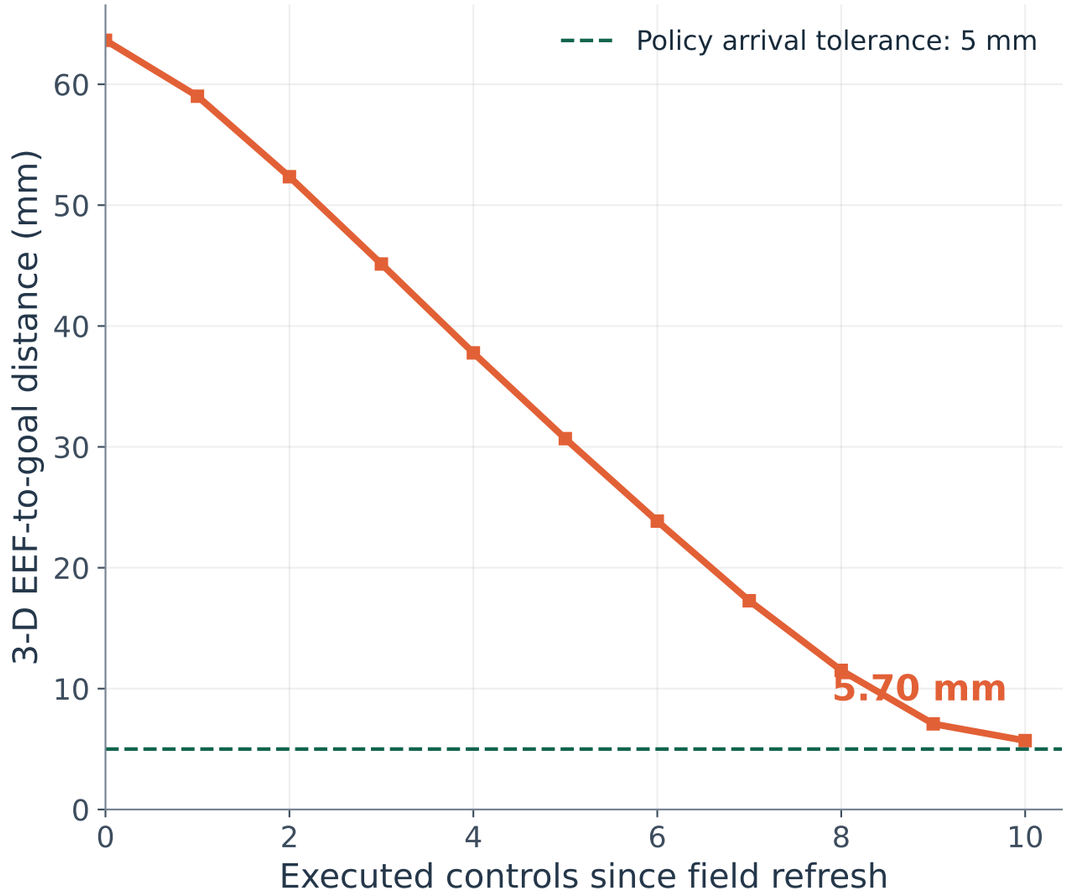
Point-path validity did not certify gripper clearance

Recorded actions 300–309 (zero-based) | 10 executed controls | EEF measurements only

Planned geometry and actual motion



Distance to the model's goal



Forbidden contact: left finger ↔ ramekin at action 309, physics substep 7 (zero-based).

The last control was interrupted after 8 of 25 physics substeps. Contact identity comes from the evaluator.

EEF path validity is not full-gripper collision clearance. No object geometry is inferred from this plot.
